Professional Summary

Software Engineer and AI/LLM Engineer with production experience across backend APIs, RAG systems, AI agents, and full-stack applications using TypeScript and Python. Core stack includes Next.js, FastAPI, LangGraph, Docker, CI/CD, authentication/RBAC, and production observability.

Education

Bhagwan Parshuram Institute of Technology — New Delhi, Delhi
Bachelor of Technology in Information Technology — *Aug 2023 – Aug 2027*

Experience

AI/LLM Intern — Sep 2026 – Present
PlanCover (HII Insurance Broking Services Pvt. Ltd.) | *Certificate* — *Gurugram, Haryana*

- Deployed a **production AI insurance assistant** combining RAG over policy documents and SOPs with authenticated LLM tool-calling across **4 core insurance data domains**—policies, claims, benefits, and employees—using Python, FastAPI, LangGraph, Pinecone, and OpenRouter.
- Identified and responsibly disclosed a **production-linked authentication vulnerability within the first week of joining**, reproducing an OTP exposure path from an unauthenticated session that could enable verification bypass and employee account impersonation; documented the attack flow, evidence, and security impact to support engineering remediation.
- Engineered a grounded response architecture across **2 execution paths**—semantic vector retrieval and live REST APIs—with RBAC-aware access control, real-time streaming, source citations, and observability across **3 critical stages**—retrieval, model generation, and tool calls—using Langfuse, Sentry, and Docker.

AI Full-Stack Developer & Automation Systems Associate — Jun 2026 – Jul 2026
Dasgupta Maiti & Associates | *Certificate* — *Kolkata, West Bengal*

- Delivered a production MERN platform for Dasgupta Maiti & Associates with JWT authentication, bcrypt password hashing, RBAC, Zoho Mail via OAuth 2.0, Cloudinary CDN, multi-collection search, and `react-helmet-async` SEO with XML sitemaps for 100+ users.
- Automated production releases with a custom `deploy_prep.sh` CI/CD pipeline for one-click cPanel builds; configured SSL, DNS (MX, SPF, DKIM), and PDF data migration with `pdf-parse` to support 99%+ uptime.
- Optimized a full-stack web system for Yashoda Bhawan with an RBAC admin dashboard and restructured database schema, reducing query response time by 40% on shared hosting.

Full Spectrum Product Engineering Intern — Jun 2025 – Aug 2025
Syuniqe | *Certificate* — *Greenfield Colony, Faridabad*

- Spearheaded end-to-end engineering of Syuniqe's production website using Next.js, TypeScript, and Tailwind CSS with Clerk waitlist integration, supporting a projected launch audience of 10K+ users.
- Unified validation across **2 application layers**—client and server—using Zod within a Zoho Mail contact pipeline, eliminating duplicated validation logic and standardizing request handling across the submission flow.
- Expanded the product across **3 surfaces**—the marketing website, embedded PowerHub interface, and Raspberry Pi kiosk—including high-fidelity Figma prototypes and a custom flashable OS generated with `rpi-image-gen`.

Projects

Codenaya — Jan 2026 – Present | Live | GitHub
Next.js • TypeScript • Vercel AI SDK • WebContainers • E2B • Inngest • Convex • Clerk • CodeMirror 6 • Sentry

- Structured a full-stack AI-native browser IDE across **6 feature modules, 7 API routes, 4 database tables**, and **3 concurrent runtime processes** (Next.js, Convex, Inngest), using Feature-Sliced Design to minimize cross-module coupling and support independent feature delivery.
- Created a **fully autonomous AI coding agent** using `@inngest/agent-kit` + Vercel AI SDK with **8 custom filesystem and web tools** and multi-provider LLM support (Claude, Gemini, OpenAI), enabling code generation, modification, and debugging through natural language with real-time status streaming via Convex subscriptions.
- Shipped **3 AI-powered editor features** on CodeMirror 6: ghost text completions, Cmd+K inline edits with accept/reject flow, and a context-aware selection tooltip, each packaged as an isolated extension with debounced fetchers to eliminate redundant API calls and preserve editor performance.
- Provisioned **2 sandbox execution runtimes** using WebContainer API (in-browser Node.js) and E2B (cloud sandboxes), with a shared abstraction layer, `xterm.js` terminal I/O, and **COEP/COOP headers** conditionally applied via Next.js middleware to isolate SharedArrayBuffer requirements without breaking default-mode CORS.
- Secured **20+ system-level Convex mutations** through a **2-tier security architecture**: Clerk JWT with per-resource ownership validation for user-facing requests, plus a shared internal key restricted to Inngest background jobs and isolated from client-side code.

Projects

Blogfolio
Nov 2025 – Jan 2026 | Live | GitHub

Next.js • TypeScript • Convex • Tailwind CSS v4 • Better Auth • Framer Motion • shadcn/ui • Zod v4

- Enabled **2 real-time collaboration capabilities**—commenting and live reader presence—using Convex reactive queries and `@convex-dev/presence`, delivering instant comment propagation and per-post concurrent viewer counts without polling.
- Accelerated navigation to **under 1 second** through predictive link prefetching (`js.foresight`) and Next.js RSC-level caching with `cacheLife()`/`cacheTag()` directives for ISR-style invalidation, eliminating third-party CMS dependency while preserving content freshness.
- Orchestrated a **3-part content pipeline** spanning Convex file storage, image uploads via Server Actions, and Better Auth email/password sessions protected by Next.js middleware, alongside a reusable UI system based on Tailwind CSS v4, shadcn/ui, and Framer Motion.

Technical Skills

Languages: JavaScript, TypeScript, Python, C/C++, SQL, HTML, CSS
Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, JWT, OAuth 2.0, RBAC, Authentication & Authorization
Frontend: React.js, Next.js, Tailwind CSS, Material-UI, shadcn/ui
Databases & Data: PostgreSQL, MongoDB, Convex, Pinecone, Vector Databases
AI/LLM: Agentic AI, RAG Systems, LangChain, LangGraph, LLM Tool Calling, OpenRouter, Vercel AI SDK, Langfuse
Engineering: System Design, Data Structures & Algorithms, CI/CD, Docker, Git, GitHub, Sentry, Postman, Figma
Libraries & Platforms: Zod, Jest, TanStack Query, Zustand, Better Auth, Passport.js, Inngest, WebContainers, E2B

Achievements

- **Hackathon Finalist**: Advanced to the final rounds of multiple national-level hackathons; view certificates.
- **150+ DSA Problems Solved**: Consistently tackled algorithmic challenges across arrays, trees, graphs, and dynamic programming on Codeforces and LeetCode, reinforcing problem-solving depth for software engineering roles.
- **Social Media Lead, SheBuilds Hackathon**: Owned end-to-end social media strategy for SheBuilds, driving **2,000+ registrations nationwide** through targeted campaigns and community outreach and setting the event's highest participant count.
